

Company description

Atlas Antibodies enables leading neuroscience research worldwide through providing primary antibodies and protein standards for targeted proteomics. Based in Sweden and with our roots in the Human Protein Atlas Project, all our over 21,000 products are affinity-purified, reproducible, selective, and specified for their target proteins through our enhanced validation process. They are tailored for use in research on signaling, neural lineage markers, developmental processes, and aging and neurodegenerative disorders in human and rodent tissue samples.

Discover our [Triple A Polyclonals™](#) and [PrecisA Monoclonals™](#) for neuroscience research.
